

# Matching

Given the height of N men and M women. We need to form X pairs of one man and one woman. H is the maximum height difference of a pair,  $H = \max(\{|pair.manHeight - pair.womanHeight| \text{ for } X \text{ pairs}\})$ . What is the minimum possible value of H?

## Input

- The first line contains three integers N, M, X ( $1 \leq N \leq 10^5$ ).
- The second line contains N integers indicating the height of N men.
- The third line contains M integers indicating the height of M women.

## Output

The minimum possible value of H.

*Note: 50% test case:  $X = N = M$*

## Sample

Input	Output
5 6 3 150 180 165 184 156	3
152 168 175 159 168 190	
5 5 5 150 180 165 184 156	12
152 168 175 159 168
