

Weird Function

Let us define:

- $F[1] = 1$
- $F[i] = (a * M[i] + b * i + c) \% 1000000007$ for $i > 1$

where $M[i]$ is the median of the array $\{F[1], F[2] \dots F[i-1]\}$.

The median of an array is the middle element of that array when it is sorted. If there are an even number of elements in the array, we choose the first of the middle two elements to be the median.

Given a, b, c and n , calculate the sum $F[1] + F[2] + \dots + F[n]$.

Input

The first line contains T the number of test cases. Each of the next T lines contain 4 integers : a, b, c and n .

Output

Output T lines, one for each test case, containing the required sum.

Constraints

$$1 \leq T \leq 100$$

$$0 \leq a, b, c < 1000000007$$

$$1 \leq n \leq 200000$$

Example

Sample Input:

```
2
1 0 0 3
3 1 2 6
```

Sample Output:

```
3
103
```
